

The Electronic Underground Affiliation®

Who We Are:

We are a diverse coalition of people, coming from various backgrounds and environments. Dedicated to keeping information flowing knowing that the media doesn't always reveal the truth "...in the public's best interest." Society has allowed itself to be lulled into the belief that regardless what is going on around them, such entities as CNN & Local news media is giving them 100% of the truth. Our resources can outweigh some of the greatest hurdles, our greatest resource that the E.U.A.® has are it's members.

What We Are:

The E.U.A.® is a assorted group that uses their skills in the areas of social engineering, computer proficiency, in depth knowledge of telephone systems, and various "black arts" abilities to disseminate information to public light. The E.U.A.® is made up of open thinkers, political activists, hackers, fone phreaks, and the likes who are seen by main stream society as "different."

What We Do:

The goal of the E.U.A.® is to gather, collect, disseminate information on a variety of subjects, a majority of which is related to current and future computer systems and technology. We believe in the free exchange of both idea's and information. With the coming millennium, society as a whole is shifting from a monetary based to a more political and information based society, in which the currency of the new millennium will be information.

What's really going on?

World governments have know this for years, and are currently attempting to "manage" and create a "safe" environment on the Internet. Which translates to "total control" of the Internet. Already we are seeing the governments actions towards creating a "politically safe" environment and controlling the decisions and beliefs that society has. The governments is attempting to ensure that they will maintain their grasp on the public for as long as possible. This can be seen in the attempts at creating the "Clipper Chip." The idea alone that would allow the government to gain access to your information upon a moments notice. Yet they wanted to push the fact that "We would require a court mandate in order to [legally] gain access to your files and information." First, why do they need to be able to get into and have access to your information? Unlike Department of Defense and Intelligence community agencies that members have background checks run on them for the purpose of "National Security" and the "good of the public," we haven't asked that we be included in their fiefdom of control. Yet day in and day out we are subjected to the control of the government. Why does a person need two or three forms of ID, a reference and point of contact for a post office box? A Postal Emergency!!! In all of my life, and I am sure in most of your's, you have never been contacted by the United States Postal Service to respond to a "Postal Emergency." Sound like a story? Just check it out, the Co-Sysop for APOC2K, ran into just this when recently trying to get a P.O. box for APOC2K.

What Can I Do?

Society has been complacent for too long. We hear about it each day. Today's society has basically gone the way of the lemming, utterly without individual thought or idea. With the ready access to the Internet, people have spent hour's on AOL, CompuServe, and Prodigy looking at the pretty pictures! ! ! Yet they don't have a clue to as what is going on around them. Society has started attacking hacker's and phone phreaks with a re-newed vengeance. Why? Over 70% of all over the wire attacks are from internal sources, 25% are from competitor's and/or industrial spies, leaving only a startling 5% of over the wire attacks from hackers.

Why the big push towards hackers? Because, believe it or not, we think! ! ! Hacker's have always been creative thinkers, quick on our toes (or keyboards). As hacker's, we have always managed to adapt and overcome most obstacles in our way. So why then? *We pose a threat to the government.* Normally, we can find "loop-holes" that others have missed. We don't normally conform to the ideas of society or the ideals of the government. Hacker's have grown to become a vast plethora of information and ideas, most of which have not, nor will ever, conform to that of the government.

Tired of this? Want to know what you can do? Join the E.U.A. and put your talents to a worthy cause...

...Your freedom!!!
